**GENERAL RECOMMENDATION**

- Before fitting the radiator it is necessary to wash out the heating system to remove any existing mud, scale, work residues, traces of flux, oil, etc.

- When the system water pH is outside the 5.5-8.5 range and/or when the dissolved is above 0.1mg/liter, it is always needed to protect the heating system components (the radiator is one of these) with a proper chemical treatment compatible with all parts in contact with water (silicon rubber too).

- In order to fit the radiator to the wall, it is necessary to choose the proper fixings for the wall material.

- If the system water exceeds 50°C, please install a warning mark near the radiator to avoid any accidental scalding.

- Clean the radiator surface only with a soft cloth to avoid scratching the finish and do not use chemical agents during cleaning operations. It is prohibited to climb on the radiator.

- Maximum working temperature 95°C, maximum working pressure 4 bar.

---

**DESCRIPTION**

- **RADIATOR **x 1
- **TOP - RIGHT CLIPS** x 1
- **TOP - LEFT CLIPS** x 1
- **BOTTOM - RIGHT CLIPS** x 1
- **BOTTOM - LEFT CLIPS** x 1
- **END PLUG** x 1
- **AIR VENT** x 1
- **WALL ANCHORS** x 4
- **GASKETS** x 4
- **FIXING SCREWS** x 4
- **WASHERS** x 4
- **PTFE tape**
- **Electric drill**
- **Masonry drill bit appropriate to the fixings**
- **Adjustable spanner**
- **Radiator valve hex key**
- **Flat head and phillips head screw drivers**
- **Spirit level**
- **1 lock shield valve and 1 gate or thermostatic valve**
- **Adjustable spanner**
- **Radiator valve hex key**
- **Flat head and phillips head screw drivers**
- **Spirit level**
- **1 lock shield valve and 1 gate or thermostatic valve**
